

BMPBA Master-Pin-Control Basic

Revolutionary Pin System | developed with Dr. Istvan Urban

Sistemul Master-Pin-Control a fost dezvoltat special pentru fixarea membranelor resorbabile, neresorbabile, sau de titan. Multumita varfului ascutit si designului stabil, pinii pot fi plasati cu precizie in osul cortical. Pinii au un mini-fir suplimentar și sunt un hibrid între șurub și ac. Firul permite îndepărtarea ușoară și sigură după perioada de vindecare. Master - Pin -Control este un sistem de bază cu un set redus de instrumente

The Master-Pin-Control system was developed specifically for the fixation of resorbable, non-resorbable and titanium membranes. Thanks to the sharp tip and the stable design, the pins can be placed precisely in cortical bone. The pins have an additional mini-thread and are a hybrid of screw and pin. The thread allows easy and safe removal after the successful healing period. Master-Pin-Control Basic is an entry level system with a reduced set of instruments.
